Exporting materials for AI

PDF and Markdown for ChatGPT, Claude, Gemini and other assistants — a page, a section or the whole public knowledge base.

Documentation is a convenient context for an AI assistant: it will answer integration questions based on up-to-date instructions.

Options

What	Where	Format
One page	⬇ PDF and ⬇ MD buttons at the top of the page	PDF / Markdown
A whole product section	“⬇ Whole section as one PDF” in the left menu or on the Documentation page	PDF with a table of contents and bookmarks
A section in Markdown	/api/docs/bundle?space=ssai&format=md	Markdown
The whole public knowledge base	/llms-full.txt	text
Index for AI agents	/llms.txt	llms.txt standard

Exports are in the language you have selected on the portal (add `&lang=en`, `&lang=uk` or `&lang=ru` to a link to choose explicitly) and respect your access rights: only pages you can see on the portal are included.

What's in the file

- Real text (not images) — AI reads it without OCR.
- Absolute links: links between pages, images and videos point to the portal, so the file makes sense outside it.
- A header with the source: page address, language, product, access level, update date.
- Videos in PDF appear as links (they play on the portal).

> **Tip: Markdown** is better for AI: it is more compact and keeps table structure. PDF is for people and for assistants that accept only PDF.

> **Warning:** “Customers” materials are confidential. Don't upload them to public AI services unless your company policy allows it.
